NexImmune is a biopharmaceutical company with a mission to help cure cancer by directing T cell function using precision technology and personalized therapeutics. The Company's proprietary AIM Technology uses artificial Antigen Presenting Cells (aAPC) to create highly targeted T cell-based immunotherapies. In preclinical studies, aAPC have demonstrated the ability to clear established tumors by expanding antigen-specific T cells when injected directly (in vivo) or when used as part of an ex vivo cellular expansion system.
